DRONE DISCOVERY PLATFORM

“To sense our world in greater detail, with greater quality over greater areas, and to develop the technology and data analytics that can do so for the benefit of Australian research, industry and education.”

- Advanced remote sensing & sampling technologies + HPC/Cloud + analytics
- For Research-Education-Industry Impact
- Driving interdisciplinary developments (Science-Engineering-IT-Arts)
- Regulatory oversight with CASA, including pilots (protecting research)
- Leveraging MTRPs

MEMS gravimetry

DATA ANALYTICS – CNN EXAMPLE

Ground truth labelled image
Manual digitisation: 51 mins

HSV input, random sampling (500), scale variation

Time taken: 82.34 seconds
Pixel accuracy: 75.05 %

Background

Vegetation

Water

Dolerite

Aplite

Tonalite

Dacite

Gabbro

DATA FLUENCY: Photogrammetry example

EXTENDING PHASE

RAW DATA PHASE ...

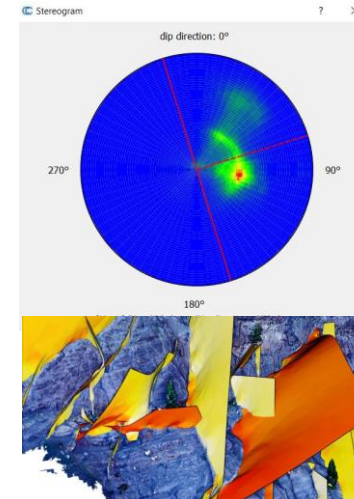

... INFORMATION PHASE

e.g.
3D point cloud
Orthophoto
DEM

e.g.
Filters
Scalar products
Some ML/DL

METHOD DEVELOPMENT

Thiele et al., Solid Earth, 2017

Rapid fault, fracture, lithology contact mapping

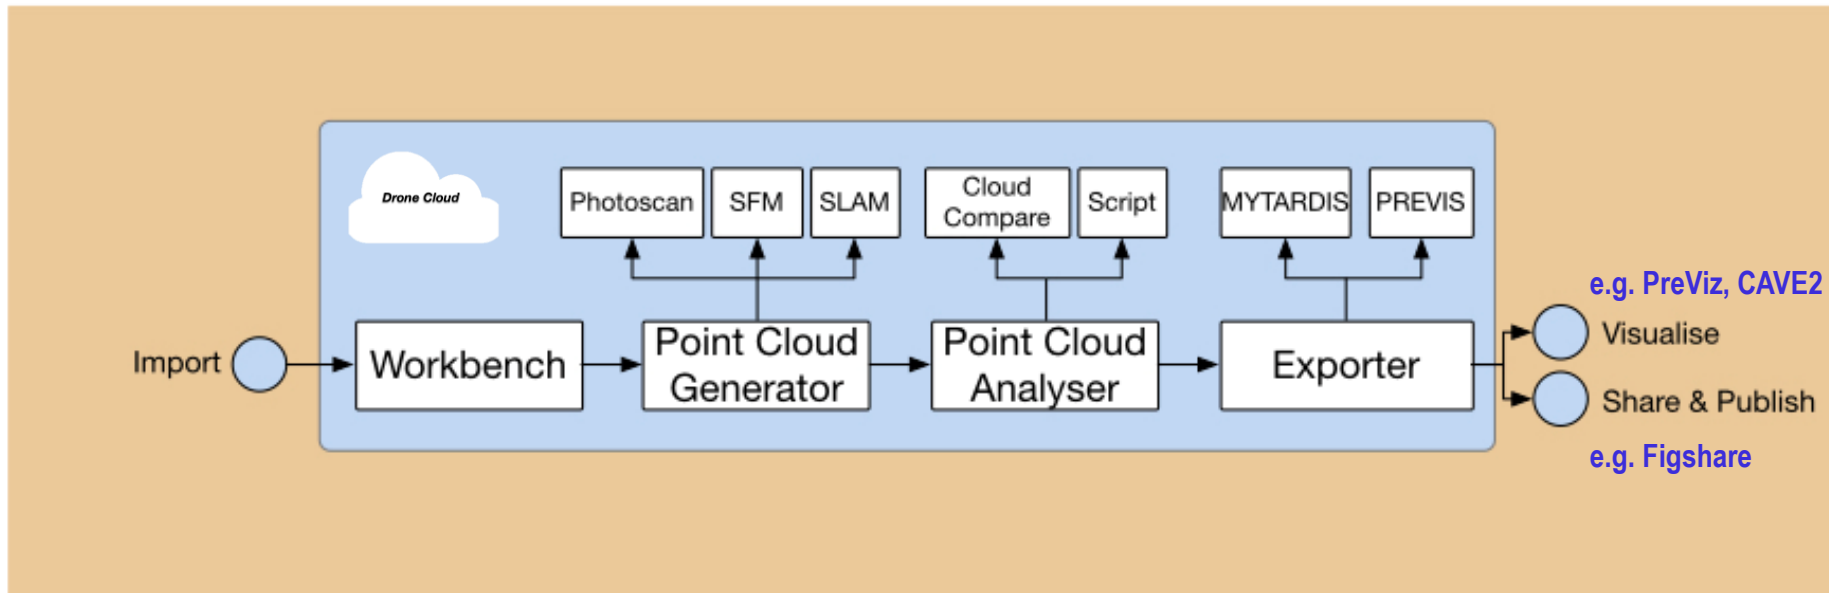

- Least-cost path solvers.
- Geologist remains involved in interpretation.
- Future – CNN or other automated

ANALYSIS & INTERPRETATION

CLOUD COMPUTE: drones to information rapidly

- Extend Workbench Application
 - Pluggable Base Pipeline
 - User Extendable
 - Define Pipelines & Analysis Scripts
 - Process Scans With Multiple Pipelines
- New Point Cloud Generators
 - SFM
 - SLAM
 - Add Custom Script Option For Analysis
 - Integrate MYTARDIS
